

Administrator

```
graph TD; Admin([Administrator]) --- SeedBankPlatform[Seed Bank Platform (Admin Use Cases)]; subgraph SeedBankPlatform; Register((Register / promote models)); ManageUsers((Manage users and roles)); end; Admin --- Register; Admin --- ManageUsers;
```

The diagram is a UML Use Case Diagram. At the top, there is an actor named 'Administrator' represented by a rounded rectangle. Below the actor is a large yellow rectangle representing the 'Seed Bank Platform (Admin Use Cases)'. Inside this rectangle, there are two use cases represented by circles: 'Register / promote models' on the left and 'Manage users and roles' on the right. Two lines connect the 'Administrator' actor to the two use cases, indicating that the administrator can perform both actions.

Seed Bank Platform (Admin Use Cases)

Register / promote models

Manage users and roles
